Halliburton: OpenWire

OpenWire (Halliburton)		
Product Description	OpenWire	
	Version: 2003.0.8.1	
	WITSML Object Specifications Version: V1.2, V1.3.1.1	
	WITSML API Specification Version: V1.2, V1.3.1	
	OpenWire is Halliburton's automated WITSML data loading utility allowing a user to	
	connect to any WITSML provider (through the GetFromStore API) and utilize what is called	
	a "pipeline" to convey data into the interpretation and engineering applications underlying	
	information management systems. This utility monitors the data as it flows providing	
	information on connectivity, performance, translation problems and even data quality.	
HALLIBURTON	OpenWire is a WITSML Client that receives versions 1.2.0 and v1.3.1 objects from	
	WITSML Service providers. We support many of the WITSML objects with the majority of	
	the use around the well, wellbore, Log and Trajectory object.

WITSML Function Coverage	Check all that apply. Explain limitations and/or special circumstances in the Comments area.
	Notes:
	Functional coverage is organized according to five kinds of product functionality with respect to
	the WITSML Standards: two kinds of client functions and three kinds of server functions.
	• A product may exhibit multiple kinds of functionality.
	 The terms <i>client</i> and <i>server</i> are used here exclusively with respect to the WITSML Server API interfaces. Clients issue requests to servers. Servers receive and respond to requests from clients.
	• Behaviors for products that do not use the WITSML Server API are classified in an analogous manner.
	The five product classifications of WITSML functional coverage are:
	 Client Products WITSML Producer Client a product that generates or otherwise obtains data that is formulated as WITSML object instances and sent to a WITSML Server to be incorporated in that server's data population. Examples of such products include products that pick up real-time data from sensor devices, format it, and send it to a server; and products that extract data from data stores, format it, and send it to a server. WITSML Consumer Client a product that issues requests for data as queries of subscriptions to a WITSML Server and then receives data as query responses or subscription publications. Examples of such products include products that acquire data from a server, possibly reformat it, and delivery it to an application program or viewer utility. 1&2. Products the exhibit combined Producer and Consume Client functions may be application programs that operate directly on a WITSML Server, such as a mullogging application or a pore pressure analysis application.
	 Server Products WITSML Receiving Server a product that performs WITSML Server functions in general and, in particular, acquires data from external sources. Data acquisition may be through WITSML API interfaces or other mechanisms. WITSML Delivering Server a product that performs WITSML Server functions in general and, in particular, delivers data to external destinations. Data delivery may be through WITSML API interfaces or other mechanisms. WITSML Managing Server a product that performs WITSML Server functions for a delivery may be through WITSML API interfaces or other mechanisms.
	functions in general and, in particular, supports requests from authorized client applications to augment (extend), modify, or delete (part or all) WITSML object instances. 3&4. The general understanding and expectation is that a product characterized as a WITSML Server supports both Receiving and
	Delivering Server functionality. 3&4&5. The addition of Managing Server functionality allows a WITSML Server product to do more than store and forward data, such as supporting data quality management client applications that help ensure the integrity and quality of data content in a Server data population.
	 General Functions 6. Virtually all products associated with the WITSML Standards will issue and/or process WITSML Server General Functions to determine the capabilities and version of a server product.
1. WITSML Producer Client	A product that (generates and) sends WITSML object instances to a destination
	process: 1a [] Sends to a WITSML Server using AddToStore interface 1b [] Otherwise

2. WITSML Consumer Client A product that requests and receives WITSML data from a source process: B [] Subscripts is a WITSML Server interfaces and receives data from source B [] Subscripts is a WITSML Server interfaces and receives data from source B [] Subscripts is a WITSML Server interfaces and receives data from source B [] Otherwise receives WITSML object instances and delivers data to additional equivalent a product that performs the WITSML Server interfaces and delivers data to additional equivalent a object instances or a Vitual equivalent a product that performs the WITSML Server interfaces and delivers data to additional equivalent a product that performs the WITSML Server interfaces and delivers data to additional equivalent a product that performs the WITSML Server interfaces and delivers data to additional equivalent b Diversion WITSML for a source process: a product that performs the WITSML Server interfaces and delivers data to additional equivalent belivers WITSML data in response to subscriptions via the Publish interface a product that performs the WITSML Server interfaces and manages (augments, instances or a virtual equivalent: b Diversion processes modification requests via Additional requests b Diversional equivalent: b Sing Processes GetVersion and/or GetCapabilities b Publish interface: b Diversional equivalent b additional processes modification requests via Additional requests b Diversional equivalent b Sing Processes GetVersion and/or GetCapabilities b Publish interfaces: b Diversional equivalent b Publish interfaces: b Diveri		
A product that performs the WITSM. Server interfaces and received state from source processes: B	2. WITSML Consumer Client	2a [_X_] Queries a WITSML Server using GetFromStore interface 2b [] Subscribes to a WITSML Server using Publish interface
A product that performs the WITSML Server interfaces and delivers data to designation processes: 4a [3. WITSML Receiving Server	processes: 3a [] Receives WITSML object instances via AddToStore interface 3b [] Otherwise receives WITSML object instances 3c [] Receives non-WITSML form data treated as if it were WITSML
A product that performs the WITSML Server interfaces and manages (augments, changes, deletes portions, or deletes entirely) WITSML object instances or a virtual equivalent: Sa [] Processes modification requests via AddToStore, UpdateInStore, DeleteFromStore interfaces and manages (augments, Line and the server interface) and the server interface requests to a WITSML Server interface requests to a WITSML Server interfaces. 6. WITSML General Functions A product that issues general WITSML Server interfaces requests to a WITSML Server: interfaces (b) [_X] issues GetVersion and/or GetCapabilities. 7 Mark D for Deliver and R for Receive, as applicable. If all functions do not apply, note either functions supported or nucleus not-supported, e.g. supported by 1a. Explain other limitations or special cases in the Comments area. 1 [] Realtime 1 [] Neellore 1 [] Log & WellLog 1 [] Metsage 1 [] Neesage 1 [] Nud Log 1 [] Nud Log 1 [] Iarget 1 [] Operations Report	4. WITSML Delivering Server	 destination processes: 4a [] Delivers WITSML data in response to queries via GetFromStore interface 4b [] Publishes WITSML data in response to subscriptions via the Publish interface 4c [] Otherwise delivers WITSML data 4d [] Delivers non-WITSML form data derived from WITSML object
A product that issues general WITSML Server interface requests to a WITSML Server: Ga [X_] Issues GetVersion and/or GetCapabilities A product that performs the general WITSML Server interfaces: Gb [X_] Processes GetVersion and/or GetCapabilities WITSML Object Coverage Mark D for Deliver and R for Receive, as applicable. If all functions do not apply, note either functions supported or functions not-supported, e.g. supported by 1a. Explain other limitations or special cases in the Comments area. [] Realtime [] Realtime [] Realtime [] Log & WellLog [] Message [] Message [] Message [] Message [] Survey Program [] Target [] Operations Report	5. WITSML Managing Server	changes, deletes portions, or deletes entirely) WITSML object instances or a virtual equivalent: 5a [] Processes modification requests via AddToStore, UpdateInStore, DeleteFromStore interfaces
