

WITSML Product Certification Program

Please complete this form and return to Jana Schey (Jana.Schey@Energistics.org) in advance of or along with the signed license agreement. Examples of processed forms as well as the downloadable license agreement are available on the Energistics website via Standards Resource Centre->Product Certification Program.

Q1	Product Name, Version, Description
A1	<p>PetroField Genie, 1.5</p> <p>PetroFieldGenie is a well site data aggregator that can receive data in WITS, LAS, WITSML, ASCII, OPC and MODBUS formats and convert to standard WITSML formats for further data dissemination. The PetroFieldGenie supports secure and fast mirroring of data from well site to the Central repository of Perfomix PetroGistics server or 3rd party central WITSML data stores.</p> <p>The PetroFieldGenie also acts as an independent WITSML data store supporting all functionalities of a standard Witsml server</p>
Q2	Vendor Name, Logo, Description
A2	<p>PERFOMIX INC, </p> <p>Perfomix is a global technology solutions provider for the petroleum industry focused on drilling performance excellence with integrated offering of real-time data and operations management products and services. Perfomix is committed to technology innovations for empowering people at the rig sites, real-time operation centers (RTOCs), offices and the Oil & Gas community. Perfomix provides highly flexible and cost effective products and software-as-a-service offerings to integrate well site data acquisition and operations systems with enterprise data management systems and specialized analysis applications. Perfomix PetroSocial solution suite for drilling performance surveillance and optimization with the virtual remote monitoring service can improve drilling performance, reduce well construction cost and avoid drilling hazards.</p> <p>Perfomix was founded by a team of experts with extensive experience in shaping and deploying state-of-the-art enterprise applications for the Oil & Gas and Manufacturing industries. Perfomix, with its competencies in real-time systems, business intelligence, portals and Web 2.0 technologies and ERP systems focuses on helping enterprises leverage innovative software solutions and hosted software services for maximizing business performance.</p> <p>The Perfomix team is passionate about the customers' business success and sustainable and predictable results – Business Performance at its best.</p>
Q3	Product Availability (from, to)
A3	From November-09-09
Q4	Form Submitter Information
A4	<p>Celestine Sebastian Vettical President and CEO Perfomix, Inc. One Greenway Plaza , Suite 930 Houston, TX 77046, United States of America, Phone : (713) 893-8610 Fax : (713) 777-532</p>

Q5	WITSML Functional Coverage. This is described in light of definitions provided directly on the form of functions of Client products as producers and/or consumers, of Server products as Receiving, Delivering, and/or Managing Servers. Functionality is summarized by checking which of sixteen overall functions are exhibited by the product.
A5	<p>Check all that apply. Explain limitations and/or special circumstances in the Comments area.</p> <p>Notes:</p> <ul style="list-style-type: none"> • Functional coverage is organized according to five kinds of product functionality with respect to the WITSML Standards: two kinds of client functions and three kinds of server functions. • A product may exhibit multiple kinds of functionality. • The terms client and server are used here exclusively with respect to the WITSML Server API interfaces. Clients issue requests to servers. Servers receive and respond to requests from clients. • Behaviors for products that do not use the WITSML Server API are classified in an analogous manner. <p>The five product classifications of WITSML functional coverage are:</p> <p>Client Products</p> <ol style="list-style-type: none"> 1. WITSML Producer Client -- a product that generates or otherwise obtains data that is formulated as WITSML object instances and sent to a WITSML Server to be incorporated in that server's data population. Examples of such products include products that pick up real-time data from sensor devices, format it, and send it to a server; and products that extract data from data stores, format it, and send it to a server. 2. WITSML Consumer Client -- a product that issues requests for data as queries of subscriptions to a WITSML Server and then receives data as query responses or subscription publications. Examples of such products include products that acquire data from a server, possibly reformat it, and delivery it to an application program or viewer utility. 1&2. Products the exhibit combined Producer and Consume Client functions may be application programs that operate directly on a WITSML Server, such as a mudlogging application or a pore pressure analysis application. <p>Server Products</p> <ol style="list-style-type: none"> 3. WITSML Receiving Server -- a product that performs WITSML Server functions in general and, in particular, acquires data from external sources. Data acquisition may be through WITSML API interfaces or other mechanisms. 4. WITSML Delivering Server -- a product that performs WITSML Server functions in general and, in particular, delivers data to external destinations. Data delivery may be through WITSML API interfaces or other mechanisms. 5. WITSML Managing Server -- a product that performs WITSML Server functions in general

and, in particular, supports requests from authorized client applications to augment (extend), modify, or delete (part or all) WITSML object instances.

3&4. The general understanding and expectation is that a product characterized as a WITSML Server supports both Receiving and Delivering Server functionality.

3&4&5. The addition of Managing Server functionality allows a WITSML Server product to do more than store and forward data, such as supporting data quality management client applications that help ensure the integrity and quality of data content in a Server data population.

General Functions

6. Virtually all products associated with the WITSML Standards will issue and/or process WITSML Server General Functions to determine the capabilities and version of a server product.

1. WITSML Producer Client A product that (generates and) sends WITSML object instances to a destination process:

1a Sends to a WITSML Server using AddToStore interface

1b Otherwise

2. WITSML Consumer Client A product that requests and receives WITSML data from a source process:

2a Queries a WITSML Server using GetFromStore interface

2b Subscribes to a WITSML Server using Publish interface

2c Otherwise

3. WITSML Receiving Server A product that performs the WITSML Server interfaces and receives data from source processes:

3a Receives WITSML object instances via AddToStore interface

3b Otherwise receives WITSML object instances

3c Receives non-WITSML form data treated as if it were WITSML object instances or a virtual equivalent

4. WITSML Delivering Server A product that performs the WITSML Server interfaces and delivers data to destination processes:

4a Delivers WITSML data in response to queries via GetFromStore interface

4b Publishes WITSML data in response to subscriptions via the Publish interface

4c Otherwise delivers WITSML data

4d Delivers non-WITSML form data derived from WITSML object instances or a virtual equivalent

5. WITSML Managing Server A product that performs the WITSML Server interfaces and manages (augments, changes, deletes portions, or deletes entirely) WITSML object instances or a virtual equivalent:

	<p>5a [<input type="checkbox"/>] Processes modification requests via AddToStore, UpdateInStore, DeleteFromStore interfaces</p> <p>5b [<input type="checkbox"/>] Otherwise processes modification requests</p> <p>6. WITSML General Functions A product that issues general WITSML Server interface requests to a WITSML Server:</p> <p>6a [<input checked="" type="checkbox"/>] Issues GetVersion and/or GetCapabilities</p> <p>A product that performs the general WITSML Server interfaces:</p> <p>6b [<input checked="" type="checkbox"/>] Processes GetVersion and/or GetCapabilities</p>
Q6	WITSML Data Coverage. This is described by indicating for each of twenty types of data whether the data is Delivered and/or Received by the product. Provision for additional data type support is given. Special limitations between Functions and Data must be explained.
A6	<p>Mark D for Deliver and R for Receive, as applicable. If all functions do not apply, note either functions supported or functions not-supported, e.g. supported by 1a. Explain other limitations or special cases in the Comments area.</p> <p>[<input type="checkbox"/> DR] Realtime</p> <p>[<input type="checkbox"/> DR] Well</p> <p>[<input type="checkbox"/> DR] Wellbore</p> <p>[<input type="checkbox"/> DR] Log & WellLog</p> <p>[<input type="checkbox"/> DR] Trajectory & Traj. Stn.</p> <p>[<input type="checkbox"/> DR] Message</p> <p>[<input type="checkbox"/> DR] Mud Log</p> <p>[<input type="checkbox"/>] Rig</p> <p>[<input type="checkbox"/>] Survey Program</p> <p>[<input type="checkbox"/>] Target</p> <p>[<input type="checkbox"/>] Fluids Report</p> <p>[<input type="checkbox"/>] Operations Report</p> <p>[<input type="checkbox"/>] Risk</p> <p>[<input type="checkbox"/>] Formation Marker</p> <p>[<input type="checkbox"/>] Conventional Core</p> <p>[<input type="checkbox"/>] Sidewall Core</p> <p>[<input type="checkbox"/>] Cement Job</p> <p>[<input type="checkbox"/>] Tubular</p> <p>[<input type="checkbox"/>] BHA Run</p> <p>[<input type="checkbox"/>] WB Geometry (Wellbore Geometry)</p> <p>[<input type="checkbox"/>] Other, specify: WITS0 (Receive), ASCII (Receive), OPC (Receive), MODBUS(Receive)</p>
Q7	Additional Information (optional)
A7	Nil
Q8	Form Submission Date.
A8	March-18-10
